

At Last, A Tent with No Poles!

Designing what may be the easiest tent in the world to set-up and take down, Airzone Recreation Inc. has patented pneumatic tent pole technology and produced an inflatable tent. The Air Zone tents are manufactured and look like any other tent, except they have "pneumatic poles" they are the same weight, size and design as any other standard poled tents, without the rigid poles.

The pneumatic support system replaces rigid poles with tough, durable air poles that withstand the harshest weather conditions. These tents will completely self-erect and deflate themselves in complete darkness, rain and wind keeping you safe and dry. But what astounds most who watch the live demo on their website, is the speed of this technology. Using any of several ways to

inflate your tent, a CO2 cartridge takes eight seconds, an air tank 20 seconds, bicycle pump 45 seconds, spare tire 15 seconds and electric battery compressor 120 seconds. The whole process is quick and easy with no confusing instructions.

The best part of all may be that when you're finished camping, you simply release the valve, sit back and watch the tent deflate in seconds. It is easily stored in its own carry bag, ready for the next camping experience.

Currently, the Air Zone tents are available in four sizes.

There are also a variety of accessory products. For more information, visit their website at www.airzonerecreation.com. AirZone Recreation Inc., 240 Clifton Rd North, Kelowna, British Columbia, Canada V1V 1N3, 877-767-9663 or 250-491-9228, or email: info@airzonerecreation.com. ●
