

03 HOUSING INFLATION

If you're setting up camp when it's dark, windy, raining, or all of the above, you don't want to be fumbling with tent poles. Opt for the Airzone 2 inflatable shelter. Instead of poles, this lightweight two-person tent is supported by a framework of inner tubes that inflate to 20 psi in seconds when you apply a pocket compressor, hand pump, or CO₂ inflator. Blow it up, stake it down, and move into your home away from home.
